ABSTRACT

California school districts reported their goals, subgoals, and priorities by matching statements to those in a catalog of 279 possible educational goals developed by a state legislature subcommittee. This report compiles data collected from 217 school districts that met certain goals collection criteria. Data from the remaining 614 participating school districts that did not meet the goals collection criteria are presented in a companion report. Tables include tabulations of goals, subgoals, and priorities data for elementary, secondary, and unified school districts, and for urban, suburban, and rural school communities. Summary tables present the most frequently mentioned goals, subgoals, and priorities including the ten statements ranked by the highest priority group.

1 Introduction

This report compiles goals, subgoals and priorities data collected from California school districts in the fall of 1974 which met certain goals collection criteria established by the Joint Legislative Committee on Educational Goals and Evaluation. Included are data from 217 of the 831 participating school districts. Data from the remaining 614 participating school districts that did not meet the goals collection criteria are presented in a companion report.

The 831 school districts that participated in the goals collection project represent 79% of the State's 1,048 school districts and 71% (2,802,969) of the State's FY 73 A.D.A. of 3,942,469. The 217 districts meeting the criteria represent 26% of the 831 participating districts, 33% (920,537) of the A.D.A. of participating districts and 23% of the total State A.D.A.

The goals collection criteria referenced above are described in a July 5, 1973 memorandum of the Joint Committee, a copy of which is included in the Appendix. The essential criteria in that memo which relate directly to school districts include the following: 1) reported data must have been verified by a five-member district reporting committee; 2) goals data must have been adopted or re-adopted after July 1, 1970; 3) community members, district administrators, classified district personnel, classroom teachers and high school students must have been involved at least moderately and elementary students at least a little; 4) community members from all ethnic and economic groups and all geographical areas must have been involved; and 5) goal setting processes must have been operated at each school site or at regional sites with school input.

Procedures and forms by which data were collected are described in a procedures manual dated September 1974. Personnel from all county schools offices received instructions regarding those procedures and forms at inservice training programs held in Los Angeles, Fresto, San Jose, Sacramento and Redding. Subsequent to the inservice training programs, county schools offices personnel worked with school districts within each respective county to collect the necessary data. Forms, procedures, training, and/or direct assistance was provided to each district as required. Additional support in the form of personnel and limited financial aid was available from those county schools offices that hosted the inservice training programs.

School districts reported their goals, subgoals and priorities by matching each statement or statement part to statements listed in a goals catalog. Goals catalogs and coding forms were provided for this task. School districts were also provided with questionnaires designed to obtain information on the goal setting processes utilized and the degree of participation by community members. The responses to those questionnaires, which are documented in a separate report, determined whether a district did or did not meet the criteria of the July 5, 1973 memorandum. To verify

that the intent of the goals as adopted by local school districts was adequately conveyed through the coding process, five-member reporting committees consisting of a community representative, a board member, a school administrator, a teacher and a student, each selected by his or her peers, were assembled in each district to approve the coding. Completed coding forms were forwarded to Systems Planning Corporation where they were translated into machine-readable format for computer processing.

In its present form, the goals, subgoals and priorities data may be used to make inferences regarding the general educational directions or aspirations of those persons who participated in the goal setting and collection processes. Since only unanalyzed data are presented, no conclusions were drawn concerning the possible validity or invalidity of the compiled data. Such a determination of validity, which would require the design and execution of experiments and tests for significant differences, was beyond the scope of the present study.

No inferences should be drawn concerning the success or failure of the goal setting processes or the goals collection project on the basis of the degree of usefulness of the compiled data. Nor should any identified limitations in the compiled data be construed as criticism of the data for individual school districts or the efforts of persons who participated in either the development of goals or in their collection. No such criticism was intended or should be implied.

In any project of the magnitude of the setting and collecting of goals, which involved hundreds of thousands of persons over a several year time span, the degree of success must be measured by the positive direction that results rather than the expectation of direct solutions to vaguely defined problem areas. A complete goal setting cycle would also include many activities beyond the adoption of goals, such as developing program objectives, initiating new programs, developing an evaluation process, and determining the effectiveness of the programs in meeting the goals and needs of the local school-community. The collecting of adopted goals, which is only one phase of a complete cycle, can hardly be expected to produce complete answers to questions that have been raised for many decades.

The strengths and weaknesses of the goals collection project and certain aspects of the goal setting processes that were followed by the state's school districts are discussed in other reports listed in the Bibliography. The interested reader seeking more comprehensive knowledge is directed to those reports.

2 Description of Data

The "Goals Report Format" illustration on the following page describes the format of tables that are presented in Section 4. Those tables include tabulations of goals, subgoals and priorities data for elementary, secondary and unified school districts and for urban, suburban and rural school-communities. The various tables aggregate data for all A.D.A. ranges for a particular district organization type or for a particular socio-geographic community type (urban, suburban or rural). A more detailed presentation of data by A.D.A. ranges for various combinations of elementary/secondary/unified and urban/suburban/rural classifications is given in the "Detailed Presentation of Data" report referenced in the Bibliography.

Each table tabulates the total references made to goals catalog codes by the goals and subgoals of school districts meeting the print criteria. For example, in elementary school districts, 57 districts out of 133 reporting data listed the statement corresponding to the goals catalog code 1.12 as one of their goals or subgoals.

A copy of the complete goals catalog which contains statements referenced by code number in the goals tables is included at the end of this section. That catalog, which represents a compilation of 279 of the possible goals of education of California school districts, was developed by a Subcommittee working under the direction of the Joint Committee. Goal statements in that catalog are grouped together under "locator" headings. For ease of reference, those locator headings also appear in the goals tables beside the first code of each group. Portions of the catalog are also included on the page across from the goals tables in Section 4 to enable the complete statements to be more easily referenced.

Goals and subgoals were treated the same in compiling the tables; i.e., the frequency of mention of a particular goals catalog code includes all references by either a district goal or subgoal. Since reference to a particular catalog code was counted only once by a single school district (multiple references were eliminated), the maximum possible number of references to a code is the number of school districts reporting data.

Priority frequencies are summarized in the goals reports by priority groups 1 through 4. With this grouping method, priorities from various school districts are accumulated, regardless of the number of priorities reported by a particular district. For example, a district with four goals prioritized 1-4 would have one priority fall into each group while a district with forty goals prioritized 1-40 would have ten priorities fall into each group. If two or more prioritized goals or subgoals referenced the same catalog code, the highest priority referenced (the lowest number) was recorded. In the event that a school district assigned non-sequential priorities, the priority groups were determined according to the actual priorities assigned. For example, a district with ten goals having two priority ones and eight priority tens would be tabulated with two entries in priority group 1 and eight entries in priority group 4.

Because of duplicate codes, non-sequential assignments of priorities, and fewer than four priorities in some school districts, the priority frequencies are not evenly distributed into quadrants. The priority group 1 total is usually greater than the priority group 2 total, etc. The total of the four priority groups for a given goals catalog code cannot exceed the total references by goals and subgoals (after duplicate codes are eliminated). If all goals and subgoals were prioritized, the two totals would be the same; however, many districts either had no priorities or assigned equal priority to all goals and subgoals. In either case, no priority was recorded in the goals reports, although the catalog code references were recorded.

3 Limitations of Data

Education for the People, Volumes I and II provided general guidelines to assist districts in developing their goals, subgoals and priorities and in seeking broad-based community participation. No emphasis to one particular goal setting process or format over another was made; it was therefore not intended that goals be developed to enable their collection and tabulation to be more easily accomplished. With the freedom to select or design processes to meet unique local needs, the actual format and content of goals varied greatly from one district to the next. For this reason, that individual district goals were not developed according to common criteria and standards with their eventual collection and tabulation in mind, the compiled data are subject to misinterpretation. Caution is therefore advised when attempting to directly interpret the data or to draw conclusions from it.

There are four basic sources which contributed to the limitations of the data. These are: 1) the collection criteria, goals catalog and goals data which were developed prior to the goals collection project and which constrained or otherwise influenced the project's design; 2) the data collection procedures that were followed; 3) the quality of the data in its collected and compiled forms; and 4) the data tabulation methods that were utilized. These four sources are closely interrelated and should therefore not be considered independently. Each is discussed below.

Work Preceding Goals Collection

The Joint Committee, in its desire to collect goals, subgoals and priorities that most accurately reflected the wishes and aspirations of the people, established certain goals collection criteria to determine which school districts would have their data included in the desired compiled report. Data from districts not meeting the criteria were to be reported separately. The selection criteria (see Appendix) were established after the goals were developed and were based upon assumptions concerning the importance of a certain degree of participation by different school-community groups. The compiled report of data from districts meeting the criteria includes all districts that indicated at least a minimum positive response to those criteria. However, since the criteria were subjectively established and the degree of group participation in each district was subjectively determined, it should not be automatically assumed that data from districts meeting the criteria are more valid or more reflective of the wishes and aspirations of the people than data from districts not meeting the criteria.

The goals catalog, which was developed prior to the goals collection project from a collection of goal statements adopted by various California school districts, contains deficiencies which contributed to the introduction of frequency biases and other limitations in the collected data. As an unedited representative collection of only some of the possible goals of education, the catalog contains numerous statements which do not conform to the broad definition of a goal, which have similar meanings, which have overlapping meanings, which have inconsistent meanings, which have gaps between meanings, which have meanings of different breadth and which omit

possible meanings. Goal statements too narrowly defined permit only a few goals or subgoals to be assigned while goal statements too broadly defined include many goals and subgoals. A lack of structure in the catalog also prohibited goal and subgoal assignments to be made in a way that would enable them to be separated in the compiled tables or would permit higher levels of tabulation of the data. Without clearly defined goal categories, frequencies for specified codes could not be summed to present overall totals by category. A category structure must precede data collection and cannot be assumed to exist afterward.

To demonstrate some of the above listed limitations in the goals catalog, the following examples are given. Goal statement 1.74, "be able to spell", is more limited in definition than is implied by the education code definition of a goal. Its intent could also be considered to be conveyed by statement of 1.61, "develop skills in reading, writing, speaking and listening", or it could be considered to be a subgoal of. 1.61. Goal statements 1.12, 1.13, 1.14, 1.17, 1.18 and 1.19 all refer to concepts of democratic ideas and ideals, loyalty and patriotism and have similar or overlapping meanings. Goal statements 1.81, "gain a general knowledge", and 1.188, "appreciate culture and beauty in the world", are much broader in meaning than 1.87, "understand elements of art and music", or 1.197, "develop a knowledge of various folk arts and folk music". Inconsistencies in the meanings and classification of goal statements exist in several of the groupings of statements. For example, some of the statements listed under "citizenship" and "ideals of democracy" could be assigned to either or both groups. This is also true of "social relationships" and "intercultural relationships", "basic skills" and "general knowledge", "character and personal values" and "self-esteem", and "preparation for entering the world of work" and "ability to make job selections".

The omission of goal statements from the catalog is evident from the number of undefined goals that were reported and the number of multiple code assignments that were made to ensure that the intent of a goal or subgoal was adequately captured by the coding process. To the extent that goal statements were absent from the catalog, some school district goals were probably force-fitted to other catalog codes.

Different levels of understanding of goal setting concepts and methods and different goal setting process models that were used by the state's school districts resulted in goals, subgoals and priorities of a variety of formats and content. Goal setting processes which began with predefined goals and subgoals were usually confined to a sorting problem, and the outcomes from different school districts usually referenced the same catalog codes. Goal setting processes which assumed no prior understanding often produced goals which referenced a broader variety of catalog codes. These different processes therefore contributed to frequency biases in the compiled data.

Data Collection Procedures

Data collected from all school districts followed standardized procedures. However, assigning codes to goals and subgoals and responding to questionnaires required judgments to be made which varied according to the knowledge and skills of the participants. Also, many persons who participated in the goals collection process were not involved in the original goal setting processes, which introduced the possibility of misinterpretation of available facts.

Because of the size of the goals catalog and the extreme detail that was possible in the coding process, the data collection task required several hours to complete. Several counties reported that the time required often led to a deterioration of effort and the introduction of coding errors. The degree to which such coding errors occurred is not known.

Undefined goal statements, i.e., statements that were not assigned codes from the goals catalog, were treated separately. Although the percentage of undefined statements was small (less than two percent); the number of such statements (775 total for all 831 participating districts) was too large to enable a full discussion of them to be made in this report. Further, since only half of the participating districts submitted goal statements with their completed coding forms, many of the undefined statements were not available. Rather than expanding the existing catalog of 279 statements by several hundred uniquely reported statements, they were discussed separately in the "Goals Collection Project Evaluation Report".

Quality of Data

Socio-geographical classifications of urban, suburban and rural used as a criterion for selecting data for tabulation were obtained from a subjective questionnaire completed by each county schools office. Because of the subjective nature of the data, some districts with similar characteristics may be classified differently and some districts with different characteristics may have the same classification. For example, two district located in similar proximity to a larger district may be classified urban and suburban respectively. Or an urban district of a certain size located near a larger urban district may have a different make-up than an urban district of similar size located in a basically rural setting. Districts comprised of more than one type, such as suburban and rural combined, may also be classified inaccurately due to the restriction to one of the three types. Since goals, subgoals and priorities data are aggregated on the basis of urban, suburban and rural classifications, it has also been tacitly assumed that such an aggregation is valid.

Variations in some of-the products and processes which preceded the collection project affected the quality of the compiled data. Some data limitations include: 1) the inability to distinguish between a goal and

a subgoal; 2) the inability to identify goal categories; 3) the inability to directly compare priorities or priority groups; 4) the assignment of multiple codes which dampen out single code assignments; 5) the introduction of frequency biases due to variations in meanings of goals catalog statements; 6) the omission of goal statements from the original goals catalog; and 7) the criteria for selection of data for aggregation.

Because of the lack of normalized criteria, it should not be assumed that the frequency of mention of a particular goals catalog code represents an objective measure of importance by all school districts which referenced that code. Caution is also advised in drawing conclusions regarding the relative degree of importance of one code as compared to other codes. Accordingly, aggregation of frequencies for different codes is not advised as there is no objective evidence for assuming that the intent conveyed in one code conveys a similar intent in another code, regardless of whether the codes come from the same locator group or from different locator groups.

Data Tabulation Methods

The tabulation of goals, subgoals and priorities data was constrained by the limitations already discussed. The only variables that were controlled by the data processing system were the data aggregation and priority tabulation methods.

The priority tabulation method described in Section 2 was the most valid available under the circumstances, but the results are still subject to misinterpretation. Variations in the meanings of goals and subgoals in different districts mean that the same priority number may relate to statements of different scope of meaning. Different districts may also have reported different numbers of priorities. A prioritized goal from one district therefore did not necessarily have the same degree of importance as the same priority number in another district. In the absence of normalized priority criterion, priorities adopted by a school district can only be validly compared as to degree of importance with other priorities from the same district. While general indications of goal directions may possibly be inferred from the priority groups, caution is advised when drawing conclusions concerning the relative degree of importance of prioritized goals.

The levels of aggregation used to compile data were totals for a given district organization type and a given socio-geographical type. The print criteria and aggregation levels were determined prior to the goals collection project and were assumed to be valid. Higher levels of aggregation were not selected due to an awareness of the lack of supporting evidence for assuming that such compilations of data are valid or because of the possible loss of information that would result from such an aggregation. A more detailed presentation of goals, subgoals and priorities data by A.D.A. range and for various combinations of organization and socio-geographical types is included in another report.

4 Presentation of Data

Compiled goals, subgoals and priorities data for select school district groups are presented in the four tables at the end of this section. Those four tables with their group descriptions include: 1) data for all school districts by organization type (page 23); 2) data for all school districts by socio-geographic type (page 31); 3) data for all school districts with an ethnic (American Indian, Black, Asian and Spanish Surname) percentage of 25 percent or more (page 39); and 4) data for all school districts with an Aid to Families with Dependent Children (AFDC) percentage of 15 percent or more (page 44). The most frequently mentioned goal statements were extracted from the tables and summarized in the eight one-page tables that follow.

The 217 school districts submitting data which met the goals collection criteria represent 26 percent of the total number of districts that participated in the goals collection project. Each participating district had an average of 53 goal catalog codes assigned to the reported goals and subgoals. About 44 percent of the goal statements were prioritized. Only 1.8 percent of the goals were undefined. A total of 88 of the 217 districts meeting the criteria (40 percent) had ethnic percentages of 25 percent or more. A total of 63 districts (29 percent) had AFDC percentages of 15 percent or more.

Data presented in the goals tables are divided into "instructional" (catalog entries 1.1 through 1.224) and "institutional" (catalog entries 2.1 through 2.55). Instructional goals pertain directly to desired learner characteristics while institutional goals pertain to qualities desired for the institution. Only about ten percent of all goal statements reported were institutional; therefore, individual institutional goals were not generally frequently mentioned. (One goal setting model followed by 22 percent of all districts, the NorCal Model, had no institutional goals category.)

The one goal statement that stands out in all tables, regardless of the grouping of data, is statement 1.61, "Develop skills in reading, writing, speaking and listening." In addition to being most frequently mentioned, this statement was assigned the most number of priorities and was also assigned the most number of high (group 1) priorities.

The second most frequently mentioned goal statement was 1.34, "Learn to respect and get along with people with whom we work and live." The third most frequently mentioned goal was 1.198, "Develop pride in work and a feeling of self-worth." However, while statement 1.34 was mentioned more frequently than statement 1.198 and also had more priorities assigned to it, statement 1.198 had more high (group 1) priorities.

Other frequently mentioned goal statements that also had a large number of high priorities assigned include, in a general descending order of frequency: 1.165, "Develop a desire for learning now and in the future";

1.76, "Be able to apply the fundamental arithmetic operations with whole numbers, fractions, decimals, and percents, and understand common mathematical symbols"; 1.81, "Gain a general education"; 1.98, "Develop good character and self-respect"; 1.110, "Learn how to examine and use information"; 1.52, "Develop an appreciation for and an understanding of other people and other cultures"; 1.1, "Learn how to be a good citizen"; and 1.212, "Practice and understand the ideas of health and safety.

The most frequently mentioned institutional goals were: 2.51, "Provide an educational environment that allows each student the opportunity to maximize his/her potential"; 2.3, "Establish effective communication between parents, teachers, students and community"; and 2.10, "Provide programs and services to meet health, counseling, psychological, welfare and attendance, and special educational needs of pupils."

The most frequently mentioned goal statements in school districts with high ethnic or AFDC percentages generally agreed with the goal statements frequently mentioned by all school districts. However, since all of the 279 statements in the goals catalog were referenced at least once, it is suggested that the tables be reviewed to determine if particular goal statements received greater emphasis in districts with high ethnic or AFDC percentages. It is also suggested that comparisons be made between tables for elementary/secondary/unified and urban/suburban/rural school districts to determine where similarities and/or differences exist.

Only a small percentage of the goals and subgoals submitted by participating school districts were reported as undefined. A review of undefined statements submitted has revealed that they were generally either:

1) goals specifically directed toward an individual school district which could not fit any catalog entry and which had no applicability for cataloging purposes; or 2) goals which were minor variations only of existing catalog statements. Several examples of some undefined statements that were submitted are presented below:

To prepare students for education beyond high school.

Develop an understanding of the requirements made of the individual by a viable society.

Each child should develop an appreciation for the importance and dignity of manual and mechanical work.

Each child should develop skills in the art of perserverance.

Know where to secure avocational information.

A knowledge of the basic principles of science.

Gain an understanding of the structure and functions of the institution operating within society.

Students shall be evaluated in relationship to their own capacities, needs and goals.

Provide educational programs in practical arts.

For a more complete discussion of undefined goal statements and the goals catalog, refer to the "Goals Collection Project Evaluation Report."

GENERAL KNOWLEDGE

1.91

CHARACTER

values to the processes of a free society.
Behave in accordance with one's standards.
Appreciate society's moral and ethical values.
Learn to accept responsibility for one's own behavior.

PROBLEM SOLVING **DECISION-WAKING AND**

Gain a general education.

Develop background and skills in the use of numbers, natural schences, mathematics, and social sciences.

Develop a fund of information and concepts.

Develop special interests and abilities.

Honey symbols, and operations.

Mark knowledge of mathematical concepts, definitions, symbols, and operations.

Noterstand the contribution of mathematics and science to technological and economic progress.

Onderstand elements of art and music.

Solving, including divergent and convergent thinking, induction and deduction, hypothesising, testing and observing, analysis, synthesis, and valuing.

Be able to speak convincingly and effectively.

Recognize and read various styles and forms of good inserting.

Understand the role of uncertainty in decision-making. Be able to distinguish fact from opinion. Be able to livent new approaches to difficult problems. Learn to concentrate.

Develop ability to use scientific methods.
Develop reasoning abilities.
Develop skills to think and proceed logically.
Be knowledgeale about and use the principles of making decisions and solving problems.
Understand the role of value judgments in decision.

Learn how to examine and use information. Develop ability to examine constructively and creatively.

Know how to use common sources of information. Know how to test decisions by the criteria of common

sense and reasonable expectation.
Apply accumulated knowledge, skills, and experience to present day living and planning for the future.

Society.

Society.

Society.

Society.

Changing an awareness and the ability to adjust to a changing world and its problems.

Develop understanding of the past; identify with the present, and the ability to meet the future.

Understand that the world is continually changing and be able to adapt to such changes.

Be able to solve personal problems occasioned by 1.126 1.128 1.125 1.129

1.116 1.117 1.118 1.119 1.120 1.121 1.122 1.112

ican society.

Understand governmental and political systems.

Understand the political, economic, and social problems throughout the world.

Understand the major records of history, anthropology.

Understand the contributions of sub-cultures to American society.

and past cultures.

Be knowledgeable about government and social services and how they are supported by taxation.

Understand the role of business and industry in the

and past cuitures.

1.94

Be knowledgeable about the role of the United States In world affairs, including foreign military and economic commitments, international trade and relations, and

participation in the United Nations.

56 Read for Information and pleasure.

57 Learn study skills.

58 Have profitiency in written expression.

59 Speak fluent and clear English.

50 Speak fluent and clear English.

51 Have good listening skills.

52 Have motor, sensory, and memory skills appropriate.

53 Have legible penmanship.

54 Have legible penmanship.

56 Be able to spell in a stroken level.

57 Have legible penmanship.

58 Recognize types and effects of mass communication.

59 Have legible penmanship.

50 Be able to apply the fundamental arithmetic operations with whole numbers, fractions, decimals, and percents, with whole numbers, fractions, decimals, and percents, with whole numbers, fractions, decimals, and percents, and understand common mathematics to the solution of problems encountered in daily lifting.

58 Develop skills in the use of other languages.

59 Develop writing as a means of self-expression.

BYSIC SKITTS

Develop good character and self-respect,
Develop moral responsibility and a sound ethical
and moral behavior.

100 Develop the student's capacity to discipline himself
to work, study, and play constructively.

101 Develop a moral and ethical sense of values, goals,
and processes of free society.

102 Develop standards of personal character and ideals.

103 Possess ethical, moral, social, and spiritual values and
use them to make decisions and establish personal goals.

104 Be knowledgeable about the major religions, philoso105 Develop personal discipline.

106 Understand the relation of one's personal ethical

1,100 1.101 1.102 1.104 1.105 Learn about and try to understand the changes that take place in the world.

Develop shillty to adjust to the changing demands of

understand how world problems require social change and personal adjustment for their solution. Be open to change and ready to adjust to change.

BACKGROUND FOR DATA COLLECTION AND REPORTING FORMAT

In Aug t of 1971, John Vasconcellos, Chairman of the Joint Legislative wittee on Educational Goals and Evaluation, and Dr. Wilso, State Superintendent of Public Instruction, believing in the concept of community involvement in the development and adoption of local school district goals and objectives, entered into an agreement to coordinate efforts and work together in a process to assist school districts determine their philosophies, goals, objectives and priorities.

The Legislature, in recommending the goals process, was not recommending a specific method to be used nor attempting to influence the outcome of the process in any way. However, the guidelines in Education For The People, Volumes I and II, provide general timelines and hopeful outcomes to assist the State Legislature via the State Superintendent and State Board of Education with enabling legislation to provide the quality and equality of education for students served by the public school system in keeping with community needs and priorities.

On May 26, 1972, Dr. Wilson Riles requested County Superintendent of Schools to assume a leadership role in assisting school districts in developing their philosophy, goals and objectives with broadly based community involvement.

There is aneed to develop a system to collect the goals, subgoals, and priorities adopted by local boards of education for forwarding to the Joint Committee and the State Board of Education in order for legislators, the Department of Education, and the State Board of Education to recommend legislation to the State Legislature to consider in meeting the relevant needs of the California public school system.

DATA COLLECTION AND REPORTING FORMAT (Adopted June 26, 1973)

I. Introduction

The Legislature and the State Department of Education, believing in the concept of community involvement in the development of programs and priorities for the public schools of California, developed and recommended the process as set forth in Education For The People.

II. Statement of the Problem

Education For The People, Volume I, recommends the development of a method for the collection of goals from school districts for the purpose of identifying and recommending to the Legislature and State Board of Education statewide programs and priorities. Through this process, local goals and sub-goals will form the basis for proposing state and local program priorities for California public schools. Statewide program priorities are not to be binding on school districts: they will not be super-goals for California education. The state should be supportive of local efforts to innovate and succeed while generating information needed for state policy-making and program development. The Legislature, after having invited all citizens to participate in a goals search process, should utilize the results of citizen participation in exercising its responsibility to assist local districts to meet the goals identified by their local school= communities, including parents, teachers, students and taxpayers, and in exercising its responsibility for decision-making in state educational policy and fiscal matters.

This statement is provided to facilitate and clarify the goals collection procedure which is to be conducted at both county and state levels, and it supersedes any guidelines contained in Volume I which may conflict with this format. The process of collecting goals information from school districts will begin on November 1, 1973, or as soon thereafter as the system is ready. County school offices will compile and report this information no later than March 1, 1974, or, in case of delay in starting, four months after the opening date.

The Joint Committee's responsibility is to insure dissemination of goal and program data for state use. The goals, sub-goals, and priorities collected should represent those most recently developed; they should fit within the limits of the definitions and also have been developed reasonably within the guidelines described in Volume I. The goals, sub-goals, and priorities may be newly adopted or readopted recently by the governing board; either is acceptable if the data meet the established criteria.

III. Assignment of Responsibility

The Joint Committee will develop the data collection process with the State Department of Education and the county superintendents of schools offices to assure communication and efficiency of effort. A data collection agency will be responsible to the Department of Education for carrying out the duties ascribed to it here and in a more detailed description of duties written by the combined staffs of the Department of Education and the Joint Committee, in consultation with the county superintendents of schools.

IV. Criteria for Goals Collection and Selection of Information to be Considered

Following are the requirements for including data from school districts in the statewide study. Districts which do not meet all the criteria are encouraged to initiate or recycle the process in order to meet the March 1, 1974 deadline.

A. Local district governing board adoption of educational goals, sub-goals, and priorities is required. It is important that the educational goals, sub-goals, and priorities that are collected be current and relevant.

Criterion #1

Verification that each recommendation has been fulfilled will be made to the county superintendent or his designee by a district reporting committee, consisting of a district administrator, governing board member, teacher, student, and the District Goals Committee chairman or other lay community representative.

Members of the District Reporting Committee must be selected by their peers. The county superintendent or his designee shall verify that members were so selected.

Criterion #2

"Product data" (i.e., goals, sub-goals, and priorities), to be included in the study, must have been adopted or re-adopted by the district governing board no earlier than the school year 1970 - 71.

B. Extent of community participation

The recommended process depends upon browd-based schools community participation in the setting of educational goals, sub-goal and priorities. It is essential that there be such participation.

Criterion #3

Community members and district personnel, including classroom teachers, must have been involved at least moderately in all districts. Students in high school and unified districts must have been involved at least moderately. Students in elementary districts must have been involved at least a little. "District personnel" includes certificated and classified employees.

Criterion #4

The district reporting committee must assure that all segments of the community were directly involved: ethnic, economic and geographic characteristics must be considered.

Criterion #5

The goal setting process must have included one of the following procedures:

a. operated at each school site, with district level goals derived from the combined school geals; or

b. operated centrally or at regional sites, with participation from each school site and with school=communities free to establish and pursue their own goals and program priorities within a district framework

86

Format f reporting

For reporting purposes, the usefulness of district data depends not only on the process by which data were derived, but also on the comparable format of the product.

Criterion #6

- a. Two types of data shall be reported:
 - (1) Process data -- responses of a district reporting committee as described under Criterion #1 above. These data will be collected by the county superintendent or his designee.
 - (2) Product data -- district goals, sub-goals, and priorities (as defined in <u>Volume I</u>, page 7).
- b. The county superintendent or his designee will report on the use of the 19-step process outlined in <u>Volume I</u> based on the responses from the district reporting committees. A check list will be included for evaluating the usefulness of the 19-step process (see Volume I. page 17).

Criterion #7

A data collection agency will be selected to collect both process and product data.

Criterion #8

The Joint Committee on Educational Goals and Evaluation, in cooperation with the State Department of Education, shall provide a goals categorization system by which each district's product data will be catalogued. The county superintendent or his designee will verify the categorization of district goals information with the local school district governing board. The purpose of this procedure is to maintain the contextual meaning of data as intended by the districts.

Criterion #9

Districts with 50,000 ADA and above will be requested to forward process and product data by administrative zones where they exist, in addition to the data for the district as a whole.

Criterion #10

The data collection agency, in cooperation with the State Department of Education and county superintendents, will administer the collection system statewide to assure uniform reporting of data among 58 counties into a state data pool.

Criterion #11

based on the results of this data collection process, the Joint Committee should recommend improved procedures for recycling of the goal setting process to appropriate state, county and local agencies.
